10/674,636

For 10/674,636, pls search and interference search:

SID 2 regular full-length against the AA databases

SID 2 oligo search (≥50AAs) against the AA databases

THANKS!!

Sheridan Swope, Ph.D. Patent Examiner, AU 1652 Recombinant Enzymes 571-272-0943 (voice) E02B71 Remsen Bld (Office) E02C70 Remsen Bld (Mailbox)

The invention provides 53010 nucleic acids, antisense CC molecules, expression vectors, host cells, transgenic animals, 53010 CC methods for detecting the presence of 53010 polypeptides and CC acids, of identifying a compound that binds to the 53010 polypeptide, and cc as movel diagnostic and therapeutic agents for CC of modulating the activity of the polypeptide. The 53010 polypeptides and CC controlling disorders involving aberrant or deficient hydrolysis of CC carboxylic esters. As 53010 mRNA is highly expressed in the central and pain models, 53010 molecules can also act as movel diagnostic targets and CC pain models, 53010 molecules can also act as movel diagnostic targets and CC related disorders. A claimed method of treating or preventing a disorder cof a 53010-expressing cell involves administering a compound that that

CC which allow it to be secreted extracellularly or membrane associated. The cativity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, crediant, antiulcer, virucide, antithyroid, cerebroprotective, immunosuppressive, haemostatic, antiinflammatory, cc cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, crediant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, cc and metabolic. Polypeptides and polynucleotides of the invention are cc useful in the treatment, or as a vaccine in the prevention of, cancer, cc wound healing disorders, infection, atherosclerosis, Parkinson's disease and polynucleotides, parkinson's disease and folynucleotides of the invention are cc and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neophastic diseases, nervous system related disorders and cradiovascular disorders, pancreatitis, respiratory disorders and cardiovascular disorders, pancreatitis, respiratory disorder, thyperproliferation, systemic autoimmune disease, hyper-immunity, cc developmental abnormality, sastrointestinal ulceration, neuropathy, cc daisorders e.g. hypothyroidism, brain damages, colitis, cone photoctaristic and diseases, stroke, angiogenesis, coulties, cone disorders, diseases in the spinal cord, thyroid gland, heart, crachea, thymus, lymph node and muscular system, obesity, anorexia, cc growth abnormalities, and alleviation of precocious puberty. The sequences given in records ABP60965-ABP61019 represent novel human cc proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1(a); Page 312-313;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                        The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC autoimmune/inflammatory disorders, gastrointestinal disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorder, endocrine CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC golymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the printed specification, but was obtained in electronic format directly CC from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV; Mooney EM, Delegenne AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin EH; Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirton ES; Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Gietzer Patury S, Shi X, Suarez CJ;

```

The present invention relates to novel human secretory or membrian proteins (ADA54072-ADA55710) and their coding sequences (ADA524 ADA54071). The coding sequences are useful in the gene therapy diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

secretory or membrane J sequences (ADA52433-

New isolated NOVX polypeptide useful for treating atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and cancer.

Claim 1; Page 303; 666pp; English.

The invention relates to human polypeptides, termed NOVX, and the polypurcleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, articles, atrial septal defect (ASD), atrioversit stenosis, entricular canal defect, ductus arteriosus, pulmonary stenosis, subsortic stenosis, scleroderma, septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABUS4542-ABUS4647 represent human NOVX polypeptides haematopoietic disorders, and cancer. Sequences ABU of the invention

                                                                                                                                                                Matches
                                                                                                                                                                                                                                This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or antisonist cativity acting as an agonist or antagonist of drug and treatment of disorders associated with decreased or increased include cancer, cell proliferative disorders, autoimmune/inflammatory, metabolising enzymes. Such disorders endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a human drug form part of the printed specification but was obtained in electronic formart from EDO
                                                                                                                                                                                                            Sequence 618
                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID NO 2; 142pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Human drug metabolizing enzymes, useful disorders associated with aberrant (DME) autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Azimzai Y,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                     The invention discloses a polymucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polymucleotide CC or its partial peptide, an antibody binding to the polypeptide or peptide CC of the polymucleotide, immunologically assaying the polypeptide or peptide CC peptide of the polymucleotide by contacting the polypeptide or peptide CC with the antibody of the encoded protein, and observing the binding CC between the two, a transformant carrying the polymucleotide in an CC expressible manner and an antisense polymucleotide. The oligonucleotide is useful as a primer for synthesising the polymucleotide, or as a probe CC for detecting the polymucleotide. The oligonucleotide CC genes may be included in them, for developing a diagnostic marker or CC medicines for regulation of their expression and activity, or as targets CC of gene therapy. The genes are involved in tissue and/or cell CC regeneration. Membrane proteins, signal transduction-related proteins, disease-related proteins and genes CC encoding them can be used as indicators for diseases (e.g. osteoporosis, cancer proteins, disease-related proteins and genes concounts them can be used as indicators for diseases (e.g. osteoporosis, the activity or expression of the encoded protein to treat diseases. The sequence data for this patent is not represented in the printed concern patent office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2003-450961/43.

```

Sequence 469

The present sequence represents a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (1) a partial per (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vec

or (II); (3) a vector

Claim 3; SEQ ID NO 2; 33pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which couples specifically with (I) or (II); (7) diagnosing cat kidney of amount of (I) indicates presence of the disease; (8) a cat kidney of amount of (I) indicates presence of the disease; (8) a cat kidney measures the biological activity of urinary (I) or (VI); and (9) a cauxin detection kit which measures cauxin in a test sample. (I) is useful as a disease. (I) enables detection of cat kidney disease marker and (VI) is useful for diagnosting cat kidney correctly. (I) provides an early marker for the disease, and replaces blood testing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, neuroprotective, immunosuppressive, haemostatic, antiinflammatory, cardiant, antiuleer, virucide, antithyroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polynucleotides of the invention are useful in the treatment, or as a vaccine in the prevention of, cancer, wound healing disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoietic disorder,
                                                                                                                                                                                                                                                                                                                                                                                                             Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder.
                                                                                                                                                                                                                                                                                                                                                     Claim 1(a); Page 315;

Carboxylesterase-like enzyme is compounds that increase the ability of human carboxylesterase-like enzyme decrease or modulate the activity of compounds that increase the ability of human carboxylesterase-like enzyme decrease. Such as organophosphorus intoxication, cancer and osteoporosis. Compounds that increase the ability of human carboxylesterase-like enzyme carboxylesterase-like enzyme decrease. Such as detoxifying agents. Compounds are useful as detoxifying agents. Compounds are useful as detoxifying agents. Comparticularly dental implants. Carboxylesterase-like enzyme is useful in composite assays for detecting diseases and antagonists are useful in composite assays for detecting diseases and abnormalities or mutations in the nucleic acid sequences which encode the enzyme. The coding sequence of carboxylesterase-like enzyme polynucleotide is useful conformations which specifically bind to mRNA transcribed from useful for modulating carboxylesterase-like enzyme gene expression. The present sequence is rat carboxylesterase-like enzyme gene expression. The

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human CC proteins AAB58711 - AAB59128. The DNA and protein sequences are CC associated with breast and ovarian cancer. Included in the invention are Sequences AAF22032 - AAF22040 and AAB59129 which are used in the convention. The breast and ovarian cancer associated DNA protein sequences of the CC invention. The breast and ovarian cancer associated DNA, protein, agonist concurrences exhibit cytostatic; immunosuppressive; nottinglation antiparasitic antialergic; hepatotropic; antidiabetic; continugal; antiparasitic and cardiant activity. The polynucleotide and CC antifungal; antiparasitic and cardiant activity. The polynucleotide and corest and ovarian cancer. The nucleic acid sequences, proteins, agonists confirmune disorders e.g. Addison's disease, prevention and treatment CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; infertious diseases such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            문

S19307
Carboxylesterase (EC 3.1.1.1) precursor - pig
N;Alternate names: proline-beta-naphthylamidase
C;Species: Sus scrofa domestica (domestic pig)
C;Accession: S19307; S23607
R;Matsushima, M.; Inoue, H.; Ichinose, M.; Tsukada, S.; Miki, K.; Kurokawa, K.; Takahash
A;Title: The nucleotide and deduced amino acid sequences of porcine liver proline-beta-r
A;Recression: S19307; MUID:92070571; PMID:1959668
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A; Molecule type: mRNA

## Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.
